

RailDigital Summit

2017

Pieter Rypma
Siemens Rail Automation

What is meant by the 'invisible' Digital Railway?

Where are we now with the 'invisible' Digital Railway?

- Unique microcosm of metro railways - deliver unprecedented levels of throughput.
- The challenge is to scale this up to the UK railway we know today
- Expectation of invisibility has increased
- Technology is available today and 'invisible', as long it is reliable

How have things changed over the course of a year?

- Passenger ETCS on-board contracts being awarded
- ECI works for Digital Railway
- RDIC at Melton
- ENIF: Class 700, Class 800 testing
- Digital Rail – Commercial & Procurement, Collaboration strategies
- Some uncertainty around L2 vs L3 – Transport Select Committee findings
- Level 3 Laboratory tests
- ProRail/NR L3 ‘Hybrid’ solution

- To name a few.....

International experience

Riding High on World's First Cloud-Based Rail Traffic Control System

And finally

Thank you
